

CR-141957

## DIVISION OF LAND USE RESEARCH, CSIRO

Title of the Investigation A study of the usefulness of Skylab EREP data for earth resources study in Australia. (In particular Vegetation physiognomy, Land use, and Major land forms with reference to thematic mapping.)

Identification Number SR 557

Accomplishments None. Only within the last two days have we received photos in addition to the black and white photos received in July 1974, and we cannot at this stage contribute anything useful.

Significant Results cursory examination at least shows this - that the Skylab photos alone would provide us with all the pictorial information we needed for surveys in arid and semi-arid regions according to the pattern of our Alice Springs survey (mapping at a scale of 1:1 000 000).

Major Problems As before - delay in receiving the photos, and heavy cloud cover.

Papers etc. None.

Recommendations As before - we are not yet in a position to make recommendations.

"Made available under NASA sponsorship in the interest of early and wide dissemination of Earth Resources Survey Program information and without liability for any use made thereof."
